Ana M. Viamonte Ros, M.D., M.P.H.
State Surgeon General

EXISTING SYSTEM WORK SHEET

All septic tanks must be pumped and certified within the last three (3) years and submitted as part of this application.

Floor plans of both the existing and the proposal are required.

- Is this an addition? Yes No
- Is this a replacement home? Yes No
- How many bedrooms do you propose? _____ BR
- What is the habitable area of the proposal? _____ SQ FT
- How many bedrooms are/were existing? _____ BR
- What is the habitable area of the existing? _____ SQ FT
- What is the total number of bedrooms when proposal is complete? _____ BR
- What is the total habitable area when proposal is complete? _____ SQ FT
- Has the structure been removed or the property vacant for 90 days or more? Yes No

If it is determined that there is an increase in estimated sewage flows, **or your system violates the 90 day timeframe for abandonment** your existing system **may** be required to come into full compliance per 64E-6 standards through a modification permit or you may apply for a variance to this rule.

If your addition requires a second septic system an engineer registered in the State of Florida **may** need to split the estimated sewage flows between the existing and proposed. The existing system will also have to have all tanks certified and the Alachua County Health Department will need to evaluate the drainfields.
